Anna R. Case Study: #026 shoulder

Anna's history reveals chronic shoulder issues that was treated with multiple methods and also with spinal and extremity adjustment for several months. Anna decided that surgery was the option and even 2 months after surgery she still experienced relentless pain and a frustration of extreme loss of flexibility and range of motion loss. Anna approached us about the use of the laser to increase the flexibility and lessening of the pain. Watch what occurred after the first Klaser Class IV treatment.

Range of motion: CS #026-07

Immediate change after just one K-Laser treatment

6-11-07 Pre treatment ROM loss

Pre K-laser treatment:

Note the limited ROM of her right arm. With pain as only one of the limiting factors.

6-11-07 After **ONE** K-laser treatment

Post K-laser treatment: Same day

10 minutes after her first treatment.

Note the smile on her face as **80%** of the pain was immediately relieved.
