

**Case study:** 54-year old woman with cellulitis and peripheral edema of ten years' duration. Treatment consisted of Lasix, 30 to 60 mg per day, off and on the entire ten years with no effect. After consultation, the K-Laser was applied, pre-set A1 (Edema/Congestion) for four minutes on each leg. A total of four treatment sessions over a period of eight days elapsed in the pictures shown below. Significant edematous reduction is easily noted. It is also noted that the patient felt good enough about herself to paint her toenails.
