

STAR TREK

Method of Healing Movie producers predicted it ... and now it's true

Who could have predicted that some of the methods used in the series Star Trek would be used today?

Do you remember the wand that was waved over the body to heal it? The person recovered in record time.

"I remember watching those Star Trek shows 20 years ago," said Dr. J. Rod McGinnis of the McGinnis Chiropractic & Laser Therapy Center in Sacramento. "If you asked me back then if I thought their methods of healing worked, I would probably have looked at you as if you were nuts for even asking!"

But now he knows the truth – that technology has brought some of the Trekkie methods right here to the forefront of medicine, and physicians who use them are amazed with the results they're achieving.

Dr. McGinnis is the only practitioner here in Sacramento who's using the 'Star Trek wand' for accelerating the healing process for stubborn ankle and shoulder injuries that haven't healed.

The wand is a high-tech Class IV laser that, according to research reports and physicians, accelerates tissue repair and cell growth. It also improves vascular activity, increases metabolic activity, and improves nerve function.

"What this means to the patient is faster healing from better blood supply and quicker cell turnover rate," Dr. McGinnis said.

Here's what one patient, E.S. said about his experience with the laser:

"I have had a shoulder problem for ten years and could not even throw a ball with my kid. My wife saw Dr McGinnis first for plantar fasciitis that had been present for 6 years. After she got such great response in two visits, I decided to try it on my shoulder problem. I was amazed that this pain I had lived with for

"I have been a body builder for many years. Weight training and exercising have been a huge part of my life until about seven years ago when I incurred a shoulder injury which turned into arthritis. I had experienced constant excruciating pain that made it difficult to sleep and lift my arm. I finally had to end my work out sessions because the pain was too bad.

I had gone to Medical Doctors that gave pain killers and muscle-relaxers, with no relief. Then one Doctor talked me into Cortisone shot which gave me some relief temporarily, then the pain returned with a vengeance. By this time I was at the end of my rope and I was tired of having my life controlled by this pain.

Then I read an article written by Dr. McGinnis about his Laser Therapy Center and decided to come meet with him.

10 years was gone in only one session."
–E.S., Elk Grove, CA

The Star Trek laser, officially known as Laser Therapy 4PAIN, is totally sterile, painless during treatment, and often less expensive than other methods already in use. It's literally waved over the area that requires healing.

Another benefit is that there are no harmful side effects, something to consider before accepting prescription drugs or even surgery as your only option.

The specialized laser is beneficial in the treatment of arthritis, back pain, carpal tunnel, fibromyalgia, knee pain, shoulder pain, sports injuries and work or auto-related injuries.

"It's painless and there's little or no sensation during treatment. Occasionally someone feels mild, soothing warmth, or tingling. The treatment takes five to ten minutes, depending on the size of the area being treated," he said.

Do you have an injury in need of healing? One that you wish that would just go away so you could get on with your life? If so, just say, "Beam me up, Scottie!" and get over to Dr. McGinnis office. Give them a call at 929-8155 first to set up your courtesy consultation. 

SCI-Fi Laser in Sacramento

After consulting with him, he could not guarantee me that he could help me, but encouraged me to give Laser Therapy a try. After my first session, I was able to raise my arm over my head with no stiffness or pain. When I walked out of his office I was awed at the fact that the laser worked that fast. I have had two laser therapy treatments and am 100% pain free.

The laser therapy has allowed me to get a full night sleep and get my daily schedule back to normal. I would recommend laser therapy to anyone, it's amazing.

Thank you Dr. McGinnis for giving me my life back, pain free!!" R.R- Elk Grove
