

Assimilate that **Scar Tissue** & That Old Injury with New **Star Trek** Technology

“We are the sum of everything that has gone before...” are words heard frequently in Star Trek shows.

And if the sum of everything that has gone before you includes a few stubborn injuries that won't resolve, you may just need sci-fi technology from Star Trek to heal.

After all, everyone knows that in the future, things will be better... war, poverty and disease will be gone. People will be able to live to their potential.

The future that Star Trek talked about 30+ years ago is here now.

“I remember watching Star Trek shows 20 years ago,” said Dr. Rod McGinnis of the McGinnis Chiropractic & Laser Therapy Center in Sacramento. “If you asked me back then if I thought their methods of healing worked, I would probably have looked at you as if you were nuts for even asking!”

And now he knows the truth – technology has brought some high-tech methods of healing to the forefront of medicine, and physicians who use them are amazed at the results they're achieving.

He's one of a few physicians in the nation with a Class IV laser that uses light energy to beam healing into the area of the body that's in need of healing.

Now you won't see Dr. McGinnis in a red spandex suit with a belt when you get to his office. Instead, he'll be wearing a doctor's jacket or normal physician attire and it will be obvious he's at the command post.

You won't see his staff dressed like a Vulcan or a Klingon, either. After a history and an exam, you'll be taken to the Laser room. It's here where all the healing will occur.

“Fascinating!” you'll say in a Spock-like voice when your pains are healed by the laser.

To bravely go where no man has gone before is NOT the issue here with the

Class IV laser therapy. It's been researched pretty thoroughly, and found to accelerate the healing process for stubborn ankle and shoulder injuries. The laser looks like a wand and according to official reports, it accelerates tissue repair and cell growth. It also improves vascular activity, increases metabolic activity, and improves nerve function.

“What this means to each patient is faster healing from better blood supply and quicker cell turnover rate,” Dr. McGinnis said. “...almost of Star Trek proportions.”

The Star Trek laser, officially known as Laser therapy 4PAIN, is totally sterile, painless during treatment, and often less expensive than other methods already in use. It's literally waved over the area requiring healing.

Another benefit is that there are no harmful side effects, something to consider before accepting prescription drugs or even surgery as your only option.

The specialized laser is beneficial in the treatment of: arthritis, back pain, carpal tunnel, fibromyalgia, knee pain, shoulder pain, sports injuries and work or auto related injuries.

“It's painless and there's little or no sensation during treatment, just like Star Trek treatments. Occasionally someone feels mild, soothing warmth, or tingling. The treatment takes five to ten minutes, depending on the size of the area being treated,” he said.

If you have an old or recent injury in need of healing, and you want to get on with your life without it, don't just consider this new treatment. Take some action now.

**“What is the truth,
but our imagination?”**
–Einstein

“I have had a shoulder problem for ten years and could not even throw a ball with my kid. My wife saw Dr. McGinnis first for plantar fasciitis that had been present for 6 years. After she got such great response in 2 visits I decided to try it on my shoulder problem. I was not surprised I was amazed that this pain I had lived with for 10 years was gone in only one session.”
–E.S. Elk Grove, CA.

There's no transporter in Dr. McGinnis' clinic; technology hasn't perfected that yet, so you'll have to schedule an appointment and then drive there yourself.

It's well worth the trip. Dr. McGinnis just may be the one to tell you after your treatment, “Your pain, as it has been is over. From

this time forward, you will never look back...”

Live long and prosper.

Dr. McGinnis can be reached at Laser Therapy Center, 2020 Hurley Way, Suite 190, Sacramento; call him at 916-929-8155.
