

This patient had a fall over three years ago, fracturing his spine. He was paralyzed for 6 months and hospitalized for over a year with the following year being spent in a skilled nursing facility. Prior to his first treatment he still experienced numbness and pain from the knee down as well as peripheral neuropathy in both legs. He experienced excruciating pain in lower back and could not set upright for more than 5 minutes without pain and spasms returning.

05-03-07

The series of pictures below shows the changes that have occurred as of 7-07-07. He has regained some of the sensations in his lower limbs, He also has had reduced pain, and swelling as well as you can see the tissue looks much healthier after using the K Laser over a period of 3 months
